PROFESSIONAL SUMMARY

Full-stack .NET engineer with 6+ years of experience developing and modernizing enterprise applications using C#/.NET, JavaScript, SQL, and Azure.

AZ-204 and AZ-900 certified, with experience decomposing complex legacy solutions into maintainable, independently buildable systems.

Seeking a mid-level software engineering or consulting role focused on full-stack development, modernization, and reliable production solutions.

EDUCATION

**B.S. Computer Engineering /
December 2019**
Texas A&M University

EXPERIENCE

Software Consultant: Web & Mobile – Sparkhound, LLC

November 2023 – October 2026

Tech Stack: C#/.NET, JavaScript, SQL, PowerApps, Power Automate, Azure, GitHub Copilot, Claude

- Supported enterprise clients and internal initiatives as a full-stack developer, contributing across requirements, sprint planning, development, testing, and production support within Agile teams.
- Modernized legacy C#/.NET applications, including 22-project application, upgrading applications to supported LTS versions through refactoring, dependency updates, and architectural improvements.
- Contributed to decomposing a legacy 150-project C#/.NET solution into smaller, independently maintainable solutions, beginning with extraction of business-orchestration components and establishing an independent build for the new solution.
- Contributed to a benefits reporting architecture spanning 14 data tables and associated messaging events, brokers, and subscribers, implementing assigned database/integration components and supporting end-to-end testing.
- Leveraged AI-assisted development tools including GitHub Copilot and Claude to improve development productivity through code generation, refactoring, debugging, and documentation, with generated output reviewed and validated for correctness.
- Created technical documentation for workflow development and legacy solution decomposition, documenting processes, dependencies, and build requirements to support knowledge transfer and continued development.
- Developed and scaled PAX8 license-management automation using REST APIs and Power Automate, supporting growth from a few dozen to hundreds of temporary contractors at peak.
- Developed PowerApps solutions with Excel-like data management, selective refresh, and database persistence, improving usability and efficiency for business users.
- Used Azure DevOps for sprint tracking, work item management, source control, and deployment coordination while collaborating with distributed development teams.

Solutions Applications Developer – CAP Index, Inc.

April 2023 – October 2023

Tech Stack: JavaScript/HTML/CSS, C#/.NET, SQL Relational Databases

- Developed and enhanced application features as a full-stack developer, translating stakeholder requirements into solutions for enterprise clients including Walmart and McDonald's.
- Added administrative control to place the CRIMECAST system into maintenance mode without requiring individual account updates.
- Improved application organization by separating inline CSS and JavaScript into dedicated files.
- Improved report generation by queuing long-running jobs and notifying users when reports were ready.
- Supported migration from TFS to Git-based repositories and contributed to improvements in team development practices.

CERTIFICATIONS

- AZ-900: Azure Fundamentals
 - AZ-204: Azure Developer Associate
-

TECHNICAL SKILLS

Languages & Frameworks:

- C#, .NET, ASP.NET, MVC, Entity Framework, Visual Basic
- C++
- JavaScript, HTML, CSS, Node.js, Angular, React,
- Java
- Python
- SQL

Cloud & Microsoft Technologies:

- Azure
- Azure Functions
- Azure Blob Storage
- Azure App Services
- Azure DevOps
- PowerApps
- Power BI
- Power Automate
- Azure CLI
- PowerShell

Databases:

- Microsoft SQL Server
- MySQL
- IBM Db2
- MongoDB

Development & AI Tools:

- Git/GitHub
 - GitHub Copilot
 - Claude
 - SVN
 - TFS
 - Visual Studio
 - Squirrel SQL Client
-

Solutions Developer – Pomeroy, Vendor Client: IBM

January 2021 – March 2023

Tech Stack: JavaScript (Angular)/HTML/CSS, Java, SQL Relational Databases

- Supported the Global Print Web System microservices as a full-stack developer, maintaining existing features, developing new functionality, and collaborating with a geographically distributed team.
- Maintained and modernized existing features and developed new functionality using SOLID design principles.
- Contributed to migration from traditional servers to cloud-based infrastructure supporting frontend hosting, backend databases, and device assignment.
- Reworked device-assignment logic to eliminate hard-coded values and support future add-device requests.
- Led cleanup of obsolete and deleted printer records across device, model, and driver database tables.
- Helped establish GitHub source-control and branch-protection practices and automated integration and end-to-end testing.
- Created onboarding documentation covering local development and testing environment setup.

Software Engineer – iMedX

June 2020 – November 2020

Tech Stack: JavaScript (React)/HTML/CSS, .NET (C#, Entity Framework, ASP.NET, MVC), SQL Relational Databases

- Developed full-stack features for a medical analytics platform within a Scrum/Agile development environment.
- Implemented an alerting workflow spanning SQL data structures, Entity Framework mappings, REST APIs, and React-based UI for displaying and managing alerts.
- Developed APIs supporting dashboard data and application functionality, integrating backend services with the React frontend.
- Refined relational database structures and schemas to support the platform's planned migration toward an AWS data lake and future machine-learning applications.
- Collaborated with distributed development teams across local and international locations while applying HIPAA and healthcare data-security requirements.

Web/Software Developer – Centennial Arts

April 2019 – September 2019

Tech Stack: JavaScript(jQuery)/HTML/CSS, PHP

- Created and maintained custom client websites, developing reusable functionality and supporting ongoing web development projects.
- Created and implemented hotfixes for the site's editor.
- Collaborated with sales team members and server administrators to support client projects.
